Master System Flowchart

Generated: 2026-05-28 16:41 UTC

Single-page architecture: Frontend -> API -> Domains -> AI -> Data -> Learning

Complete System Flow (Top to Bottom)

How to Read This Flowchart

1. User interacts with Next.js pages and hooks (useChat, MatterDashboard, api.ts).
2. All protected calls go to FastAPI /api/v1 with JWT auth and middleware.
3. Work is routed to domain modules: Chat, Documents/KB, Matters, Learning, SaaS.
4. Chat uses mode_router to pick Knowledge Base, Open Law, or Hybrid paths.
5. KB answers use Ollama + FAISS only; Gemini is used for web/hybrid/coach meta.
6. Global KB and Matter KB indexes are isolated (separate FAISS paths + scope_key).
7. SQLite stores metadata; FAISS stores vectors; background jobs handle indexing/tuning.
8. Every chat turn feeds the learning loop for continuous improvement.
